

SIMPLE solutions for complex problems?

SCIENCE IS UNDER ATTACK.

Fact has become opinion. Opinion has become truth. Truth has become fluid.

This is not just dangerous, it's insulting to those of us who believe in, honor and advocate for the scientific method.

The logic, certainty and reproducibility provoked my interest in the sciences and mathematics, eventually leading me to a career in dentistry. In this world, 2+2=4. It always has and likely always will. True mathematics and science are not subordinate to modish whims nor subject to a specious majority vote.

Changes in science occur through observation, hypothesis, prediction, experimentation and statistical analysis. Unfortunately, STEM education and proficiency have been declining in the United States since the 1980s. 1, 2, 3 The proliferation of social media has amplified opinions, allowed fringe theories to gain widespread traction and served as a primary source of science discreditation. It makes one wonder: *Does real science still have value?*

Mathematics and experimentation alone do not science make. Astrologists use mathematics to generate horoscopes, and yet this is not considered science. Alchemists routinely used experiments to transform base metals into gold without success. Alchemists were not considered scientists. So, what is the true nature of science? Wikipedia defines science as "a rigorous, systematic endeavor that builds and organizes knowledge in the form of testable explanations and predictions about the world." However, this definition fails to capture the essence of science since this can be vaguely applied to nearly any endeavor. A better definition is needed.

McFadden argues Occam's razor is the only feature differentiating science from superstition, pseudoscience or fake news.⁶ Occam's razor, the principle or law of parsimony, is the principle of using the simplest solution or explanation since it likely contains the least variables. In other words, when choosing between competing hypotheses, one should choose the hypothesis that requires the fewest assumptions. Occam refers to William of Occam (1287–1347), a Franciscan friar and noted logician to whom the concept is attributed. Occam is the name of the English town where William was born. Razor distinguishes between two hypotheses by "shaving away" unnecessary assumptions or cutting apart two similar conclusions.⁷

In modern vernacular, this is often referenced as "When you hear hoof beats, think horses, not zebras" or KISS, "Keep it simple, stupid." The idea that perfection equals simplicity and vice versa has been attributed to Aristotle and the phrase, "The more perfect a nature is, the fewer means it requires for its operation." Occam's razor alone proves nothing. It merely serves as a heuristic device, a guide to distinguish between the various hypotheses.

Science is a dynamic process. What is true today may not be true tomorrow. However, the changes are based on new information, experimentation and reproducibility rather than the whim of unsubstantiated opinions, emotions or feelings. Pseudo-science can be bad for your health, so unbiased investigators vet the scientific literature and use the scientific method to debunk the plethora of false information masquerading as science. This uniquely distinguishes the sciences from other fields of endeavor. In a world of increasingly complex problems, perhaps the scientific method can offer some simple solutions.

3D PRINTING

AN OFFICE TOOL OF THE PRESENT AND FUTURE

THE ADVENT OF 3D PRINTING TECHNOLOGY HAS USHERED IN A NEW ERA OF INNOVATION ACROSS VARIOUS INDUSTRIES, INCLUDING DENTISTRY.

This technology, which allows for the creation of three-dimensional objects from digital models, has transformed some dental practices by improving the efficiency, accuracy and costeffectiveness of a wide range of procedures. In 2023, Grand View Research pegged the global market value for 3D printing in dentistry at more than \$2.5 billion, and that valuation is projected to grow more than 23% by 2030.

Dr. Patrick Dionise, of Dionise Dental, is an early adopter of 3D printing tech and said the decision was a solid one.

"My experience has been very positive so far," said Dionise. "Patients are impressed when they see the technology, so it could also be used as a marketing tool. If you have a team member that is interested in the technology, it helps keep them engaged. Another added benefit is that when a team member has downtime, they can be working on printing or the lab work involved with printing."

UPPING PRECISION

One of the most significant advantages of 3D printing is the extreme precision it offers. Traditional methods of creating dental prosthetics (crowns, bridges and dentures) often involve manual work done by human hands. Human hands are, of course, subject to human error. With 3D printing, these processes are handled digitally, resulting in highly accurate renderings. Digital scanning technologies allow for the creation of detailed

3D models of a patient's oral cavity and these near-perfect scans can then be used to design near-perfect prosthetics.

Some practices are taking a hybrid approach to digital dentistry, utilizing a "partial" digital approach that melds traditional subtractive/milling techniques done in the lab with 3D printing and/or scanning practices.

UPPING EFFICIENCY

The traditional fabrication of dental prosthetics can be a lengthy process, often requiring several weeks from initial impression to final fitting. 3D printing can reduce this time frame significantly. The integration of 3D printing with computer-aided design and manufacturing (CAD/CAM) systems also enhances workflow efficiency in dental laboratories. A survey conducted by the American Dental Association (ADA) in 2022 found that dental practices utilizing 3D printing technology reported a 30% increase in productivity. This boost in efficiency allows dental professionals to serve more patients and focus on providing high-quality care.

Dionise can attest to this increase in efficiency.

"I was unhappy with bite splints I was receiving from the lab. We had to scan the patient's teeth, send the scan out, the lab would make them, send them to us in the mail, and we brought the patient back. It was usually around a two-week turnaround," he said. "If they didn't fit

properly, I had to send them back. If there was an issue in the coming months (broken splint, dog ate it, etc.) the lab had to remake it at significant cost.

"The printer allows us to remake them for a very low cost to the patient if something is to happen. Files stay in the cloud and we can access them at any time."

(Adding a 3D printer to your practice) is worth considering. There are many different 3D printer setups, and the barrier to entry doesn't have to be very high.

-Dr. Patrick Dionise
Dionise Dental

COST-EFFECTIVENESS

While the initial investment in 3D printing technology can be substantial, the long-term cost savings are significant. Traditional dental prosthetics require multiple materials and laborintensive processes, leading to higher production costs. In contrast, 3D printing reduces material waste and minimizes the need for manual labor, resulting in lower overall expenses.

"We started 3D printing surgical guides for implants. The CBCT (DICOM file) is merged with the intraoral scan (STL file) and a surgical guide can be designed and printed fairly easily," Dionise said. "We are also printing models of patients' teeth for various applications, which has been nice getting away from pouring up models."

A cost analysis published in the Journal of Dental Research showed that dental laboratories using 3D printing technology experienced a 40% reduction in production costs compared to traditional methods.

MATERIALS AND BIOCOMPATIBILITY

The versatility of 3D printing materials has expanded the range of dental applications.
Early 3D printing technologies were limited to a few types of resins and plastics, but advancements have introduced a variety of biocompatible materials suitable for dental use, and Food and Drug Administration approvals are regularly updated as new materials are developed and tested.

Biocompatibility is a critical factor in dental prosthetics, as materials obviously must not cause adverse reactions in the mouth.

ORTHODONTICS AND ALIGNERS

Perhaps the area of dentistry most visibly impacted, in the eyes of the public anyway, by the advent of 3D printing technology is orthodontics. Ever heard of Invisalign™? Those semitransparent straightening devices are made possible by 3D printing and scanning technologies.

The scanning systems and manufacturing processes of 3D printers have made it possible to create ultra-customized orthodontic systems tailored to each patient and to do so in a relatively short period of time.

Traditional ortho devices certainly remain viable (and still the best solution in many cases) but even those time-honored systems are seeing 3D printed options in play. LightForce™, for example, creates 3D-printed ceramic brackets that can be customized to the shape and orientation of each tooth using 3D scans and software.

EDUCATION IMPACTS

Dental schools are also tapping into 3D technology, using 3D-printed models to enhance the learning experience for students.

These models can replicate a wide range of dental conditions and anatomical variations, providing hands-on training opportunities that are more realistic and comprehensive than some traditional methods, while also providing increased convenience and reduced lab costs.

Dental educators have reported improved student engagement and understanding when using 3D-printed models. These models also allow for repetitive practice without the concerns associated with working on people.

WHAT'S NEXT?

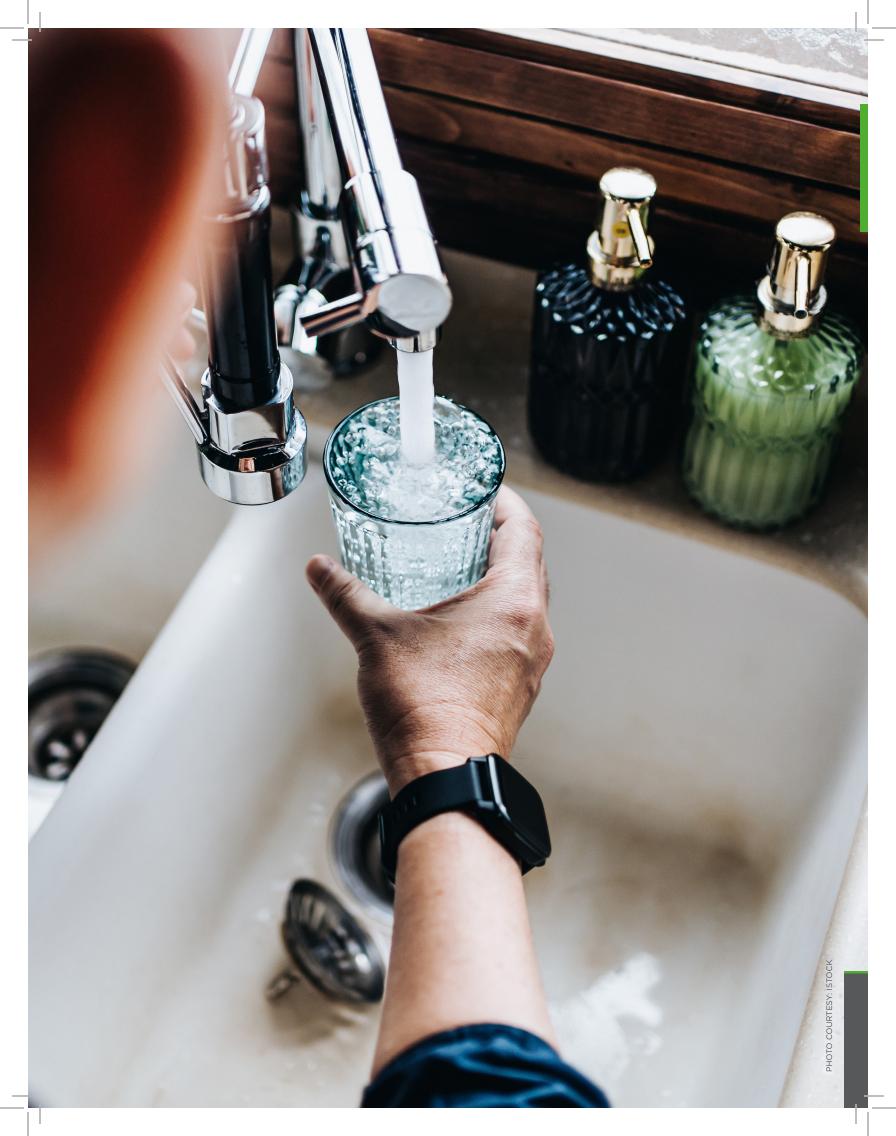

The future of 3D printing is fascinating and offers plenty of promise. Advancements in bioprinting point to a future in which 3D-printed items are made of materials that incorporate living cells in tissue-like structures that can encourage cell-to-cell growth to regenerate tissue to enhance the functionality and longevity of dental prosthetics. Add to this technology, the prospect of artificial intelligence and machine learning systems that continue to improve, and the potential offered to dentistry could be profound.

If you're considering adding a 3D printer to your practice, the ADA has a 3D Printing Guide available to provide insights into considerations around adding more digital to your dentistry. You can find the guide at engage.ada.org.

THE FLUORIDE DEBATE:

A CENTURY OF DENTAL HEALTH AND CONTROVERSY

In the early 20th century, researchers in the United States made a fascinating observation: people living in areas with naturally high levels of fluoride in their community water supplies had teeth that were remarkably resistant to decay. This discovery set the stage for a groundbreaking public health experiment.

In 1945, Grand Rapids, Michigan, became the first city to add fluoride to its water supply in a controlled manner. Over the next 15 years, data showed a significant reduction of more than 60% in tooth decay among 30,000 school children in Grand Rapids, demonstrating the protective benefits of fluoride. By the 1950s, the U.S. Public Health Service and the American Dental Association (ADA) acknowledged the success of water fluoridation in reducing cavities. This led to the widespread adoption of adding fluoride to community water supplies and its inclusion in dental products such as toothpaste and mouthwash.

Despite its success, water fluoridation is now a topic of debate. No federal law mandates the fluoridation of water supplies; the decision is typically made by municipal governments, city councils, or local water authorities. Recent studies and political leaders have called its success into question. For instance, Robert F. Kennedy Jr., U.S. Secretary of Health, claimed that water fluoridation at U.S. levels is associated with numerous health issues, including cancer. He has suggested that the

66

It's one of the nation's top 10 public health achievements of the 20th century, effectively preventing tooth decay regardless of a person's socioeconomic status or access to care.

–U.S. Centers for DiseaseControl and Prevention³

Trump administration would advise all U.S. water systems to remove fluoride from public water.¹

However, the ADA has reiterated its support for community water fluoridation, issuing a press release that cites studies showing it reduces tooth decay by more than 25% in children and adults, even in an era with widespread availability of fluoride from other sources such as toothpaste.² The ADA maintains adding fluoride to the water supply has been a boon to the dental health of Americans, with research indicating a very low risk of adverse consequences.

Yet, the debate continues. The state Senate recently voted down a bill that would have limited the fluoride amounts in water to the 0.7 mg/L amount recommended by the U.S. Public Health Service. Opponents testified that water systems would not be able to maintain fluoride levels close enough to this exact amount in order to comply. According to the Tennessee Department of Health, 88% of Tennesseans are currently served by fluoridated water systems.

As the discussion around water fluoridation evolves, it remains a critical public health issue. The balance between its proven benefits in preventing tooth decay and the concerns raised by recent studies and political figures will continue to shape the future of its practice.

New Delta Dental Groups

Delta Dental of Tennessee welcomes the following new groups. You can check eligibility and coverage details in real time with Dental Office Toolkit (DOT), or call customer service at 800-223-3104. If you need to register for DOT, email ProfessionalRelations1@DeltaDentalTN.com.

If that question gives you pause—or perhaps even that tinny taste of dread in the back of your mouth—you're not alone. Many small business owners, including those who own and run dental offices, often find marketing challenging.

A survey conducted by marketing automation software provider OutboundEngine found that roughly half of all small businesses do not have a marketing plan¹. Given that 99.9 percent of all companies in America are small businesses (according to the U.S. Small Business Administration), just about half of all businesses in America lack a basic marketing plan.

Whether you're looking to attract new patients or to help foster long-lasting patient loyalty and brand recognition, marketing can play a substantial role in your overall business. Let's dive into the building blocks needed to get started on the road to better marketing.

WHAT'S THE POINT?

To create a successful marketing campaign, channel your best Julie Andrews and belt out the most famous of lines from "The Sound of Music": "Let's start at the beginning...a very good place to start."

What is it that you hope to accomplish with your marketing efforts? Answering that question is where a marketing plan begins.

Regardless of how big (or small) your practice is or the demographics of the community in which it is located, one of the first steps to marketing success is defining your goals.

In its 2024 State of Marketing survey², HubSpot, a leading marketing platform, found that for companies with effective marketing campaigns in 2023, the top two goals defined for 2024 efforts are increased revenue/sales and increased brand awareness.

Whether you're looking to generate more revenue and retain

more patients through improved brand recognition or if you're simply looking to improve the visibility of your business, knowing what you're looking to accomplish with your marketing efforts is essential.

DIGITAL DOMINANCE

Once your goal for marketing is defined, the next challenge is determining how you'll spread your message.

Digital marketing continues to dominate the landscape, with social media and video platforms

WHAT ABOUT AI?

Artificial intelligence is here to stay. The dental industry will see its share of Al advancements and impacts, just as the marketing realm will. More specifically, dentistry has the potential to see impacts from Al, which excels with data analysis and pattern recognition, as well as generative Al, which is designed specifically for creation. From a purely marketing perspective, generative Al will most often come into play.

According to research firm Gartner's 2024 Marketing Predictions, AI will "radically reshape social media and search landscapes, creative work, brand positioning and perceptions of truth."

In that study, Gartner found that AI is already a staple of the marketing landscape, with 64 percent of marketing teams using AI to help generate marketing campaigns.

How can you utilize AI to help with your marketing efforts? Here are just a few ideas:

Text generators like Grammarly and OpenAl's ChatGPT can help you create marketing copy, analyze website copy for search engine optimization value and generate ideas for social media content.

Image generators can help create graphics and images for marketing campaigns. Design staples like Adobe PhotoShop and Canva already offer generative AI options, and systems like OpenAI's DALL-E can turn text-based requests into stunning images.

Creating videos is essential to a well-rounded marketing strategy, particularly when utilizing social media. Video creation is now available with Al assistance and is a fast-growing segment of the Al world. Platforms such as Synthesia.io, invideo.io and DeepBrain.IO's Al Studio are a few of the current leaders in Al-generated video.

pulling in huge audiences. "Traditional" marketing outlets are still utilized (think television, radio, billboards, etc.), but much of the marketing efforts in today's business world takes place in a digital space, and that percentage continues to increase.

Which digital outlets will you target? According to HubSpot, Facebook continues to be the top platform, with 57 percent of marketers using it. It is followed by Instagram at 55 percent, YouTube at 52 percent, TikTok at 44 percent, and X (formerly Twitter) at 39 percent.

MEASURE IT

Monitor the performance of your marketing efforts regularly and analyze key metrics to gauge effectiveness. Tracking website traffic, conversion rates, social media engagement and growth can keep you on track and help you determine the return on your investment in time and marketing dollars.

THE WRAP-UP

Marketing can play a vital role in the success and growth of every business, including dental practices. By embracing strategic marketing initiatives, leveraging emerging trends and implementing proven tactics, you can enhance your practice's visibility, attract new patients and grow brand awareness and loyalty.

DELTA DENTAL IS HERE TO HELP

Are you looking to up your social media game?

Delta Dental of Tennessee's marketing team would love to lend a hand.

We're continually posting new blogs and social media content to spread the good word about the importance of oral health, and we'd like you to help us make it as useful as possible for your office, too.

Simply visit DeltaDentalTN.com/Blog

(or scan the QR code) and let us know what you'd like to see included in our content. Follow us on Facebook. Instagram, and X @DeltaDentalTN. We'll tailor new articles and posts to fit your needs and, hopefully, give you a jumpstart on your future social media efforts to promote oral health. Email us at BestPractice@DeltaDentalTN.com.

NATIONAL CHILDREN'S DENTAL HEALTH MONTH: A smile for every child

NOITAIOOSSA LATNIA NA DIATAINA

Each February, the American Dental Association (ADA) sponsors National Children's Dental Health Month (NCDHM) to raise awareness about the importance of oral health. This initiative has reached millions of people across the country, promoting the development of good habits at an early age and encouraging regular dental visits to ensure a lifetime of healthy teeth and gums.

One of the highlights of this month is the ADA Foundation's Give Kids A Smile program, which has been providing free oral health education and services to underserved children since 2003. This year, nearly 1,100 events are scheduled nationwide. aiming to serve approximately 325,500 children with the help of around 25.000 volunteer dentists and dental team members.

The kick-off event took place at Meharry

Medical College School of Dentistry in Nashville, Tennessee. The event provided screenings, treatments, and oral health education to approximately 300 children from the Nashville area. The theme, inspired by the

animated film "Inside Out," aimed to make the dental visit a fun and familiar experience for the kids.

In addition to dental services, the event featured interactive stations where children learned about proper brushing and flossing techniques and healthy choices through the Colgate Bright Smiles, Bright Futures program. National sponsors Henry Schein, Inc., and Colgate-Palmolive Company donated essential oral health care products. The goal was to ensure that every child had a dental home, whether at Meharry or with a local dentist.

The ADA
Foundation's Give
Kids A Smile program
continues to be
celebrated nationally
in February, with
events taking place
throughout the year.

Supporters of the program have an opportunity to contribute through the Gift Kids A Smile initiative, with donations helping more children in need and supporting dental schools' outreach efforts.

KEYS TO HASSLE-FREE CLAIMS

At Delta Dental of Tennessee, we want the claims process to be a painless, efficient experience for network providers. Dental Office Toolkit™ (DOT) is the most efficient way to submit claims.

We've devoted countless hours to developing, refining and enhancing the Dental Office Toolkit™ to make it as efficient and effective as possible. Most claims submitted through DOT are processed in a matter of seconds, and if enrolled in the voluntary electronic funds transfer system, they are usually paid within 24 hours.

However, sometimes, claims are rejected simply because of an inadvertent mistake when submitting. Here are a few common mistakes to avoid that can lead to delays in processing claims.

COMMON MISTAKES TO AVOID

WHEN SUBMITTING CLAIMS

Stay inside the box

Make sure all info is contained within the box provided in the form for paper claims.

Zero is not your hero

Do not enter \$0 unless the primary carrier's determination was actually \$0.

Who done it?

Always submit a claim with the treating dentist's name and license number regardless of the business name or business owner. The claim form is a legal document and the treating dentist's information must represent who treated the patient.

Keep your caps on lock

Use all capital letters (CAPS) when entering data. This is easier for the system to read and will lead to fewer processing errors.

Practice good form

When submitting for services previously approved on a pre-treatment estimate, use the pre-treatment form and fill in the date the service was completed. Do NOT send a new claim.

Save the date

For procedure codes that require multiple appointments, always submit using the date the treatment was completed. For example, if submitting for a crown, always use the seat date, not the prep date.

Don't get too attached

When submitting a claim, there is no need to attach a primary carrier EOB. Simply mark the amount that primary paid in the remarks section.

Your fees, your schedule

Always submit claims using your own fee schedule and not the amount on Delta Dental's fee schedule. The DOT system will adjust the fee if necessary.

Step away from the marker

Do not highlight any section of the claim form, as this will black out the highlighted areas.

UNDERSTANDING RISK
MANAGEMENT AND RECORD
KEEPING WITH EMPHASIS ON
FRAUD, WASTE AND ABUSE

WOMEN'S ORAL HEALTH
ISSUES: THE IMPORTANCE OF
PREVENTION, INTERVENTION
AND EDUCATION

PREMEDICATION FOR INVASIVE DENTAL PROCEDURES AND PREVENTION OF ASPIRATION PNEUMONIA

This course provides dentists with essential knowledge and skills to effectively manage fraud, waste and abuse risk, along with strategies for ensuring business continuity and maintaining comprehensive recordkeeping in their practice. This presentation will demonstrate practical applications and strategies to minimize professional liability while maintaining accurate records for compliance with regulatory requirements. We will also provide dentists with an understanding of fraud, waste and abuse. The course will explore various forms of fraudulent activities, unethical behaviors and regulatory compliance related to dental practices. Participants will learn how to identify, prevent and report fraudulent activities, ensuring compliance with

regulations and ethical standards through case studies, discussions and practical examples.

Participants will be able to develop strategies to safeguard their practices and promote integrity in health care delivery.

Women undergo a variety of hormonal and physical changes as they age, including puberty, pregnancy and menopause. These changes may have a significant impact on their overall health, but also their oral health, and the connection between the two is critical. The importance of regular dental visits in young children, establishing a dental home and an effective home care routine that can be maintained long-term is a key part of minimizing the negative effects of hormonal changes in women. With improved oral hygiene habits and an overall improvement in oral health, not only will women see decreased impact on the mouth as they age, but also avoid irreversible changes that lead to decay, gum disease, and ultimately, tooth loss.

The course reviews the current recommendations for SBE and LPJ infection prophylaxis indications and regimens. The history and rationale behind the recommendations will be presented.

Delta Dental of Tennessee (Delta Dental) recently marked a significant milestone, celebrating 25 years of dedicated service to the community it proudly calls home. With a mission to ensure healthy smiles, this not-for-profit organization has donated over \$70 million since 1999, significantly improving the oral and overall health of Tennesseans.

Delta Dental, along with its philanthropic arm, the Smile180 Foundation, has been a steadfast supporter of the state's dental colleges, children's hospitals, free and reduced-cost dental clinics, and other like-minded charities.

Delta Dental's commitment to improving health and well-being is evident through its various programs. The company and the Smile180 Foundation provide resources and financial support to organizations like St. Jude, the American Red Cross, and the Governor's Early Literacy Foundation. Delta Dental is also the

"Our community is our foundation and our passion. Every day, our employees work to ensure that Tennesseans can live confidently and thrive."

Have patients with dental benefits administered by Delta Dental of Arkansas?

READ THIS

Even though you practice in Tennessee, you may have patients with dental benefits administered by Delta Dental of Arkansas (payer ID: CDAR1).

This is because Arkansas-based employers that utilize Delta Dental of Arkansas for dental benefits (including Walmart) may have employees who live in other states.

To verify benefits for these patients, Delta Dental of Arkansas has a new Dentist Portal that your office should use.

To access Delta Dental of Arkansas' new Dentist Portal:

1

Visit the Delta Dental of Arkansas website: www.deltadentalar.com and click "Login/Register" in the upper right corner.

2

Click on the **blue** "Login" button, which will direct you to the sign-in page for the NEW "Dentist Portal." If you go to Delta Dental of Arkansas' old "Dental Office Toolkit," (**green** login button) your patient's coverage will show as inactive.
